Problem:	A permanent pump motor stall (due to the presence of foreign particles from a manufacturing process) will result in cessation of drug infusion therapy, which may result in return of underlying symptoms and/or withdrawal symptoms. For patients receiving intrathecal baclofen therapy, there exists the risk for Baclofen Withdrawal Syndrome, which can lead to a life-threatening condition.																																																				
Recommendation/Actions:	<ul style="list-style-type: none"> • Forward this notice to all those who need to be aware within your hospital. • Identify and quarantine all unused affected product in your inventory. • Return all unused affected product in your inventory to Medtronic authorized representative. <p>You can find more information and recommendations from (HERE).</p>
